the detection and study of the localized selective inhibition effect in the radical initiated three dimensional polymerization of triethylene glycol dimethacrylate

#### **the detection and study pdf**

the detection and study of the localized selective inhibition effect in the radical initiated three dimensional polymerization of triethylene glycol dimethacrylate The Topic Detection and Tracking Study is concerned with the detection and tracking of events. The input to this process is a stream of stories. This stream may or may not be pre-segmented into stories, and the events may or may not be known to the system (i.e., the system may or may not be trained to recognize specific events).
